

Glensanda Gabion Stone

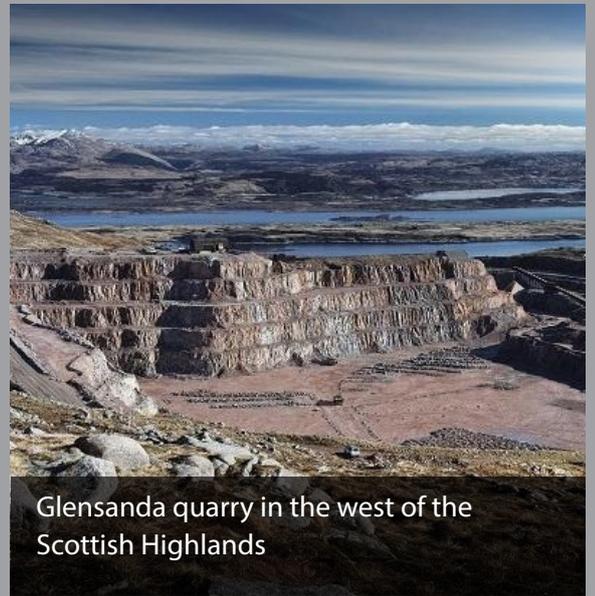

from Aggregate Industries

Why choose Glensanda Gabion Stone from Aggregate Industries?

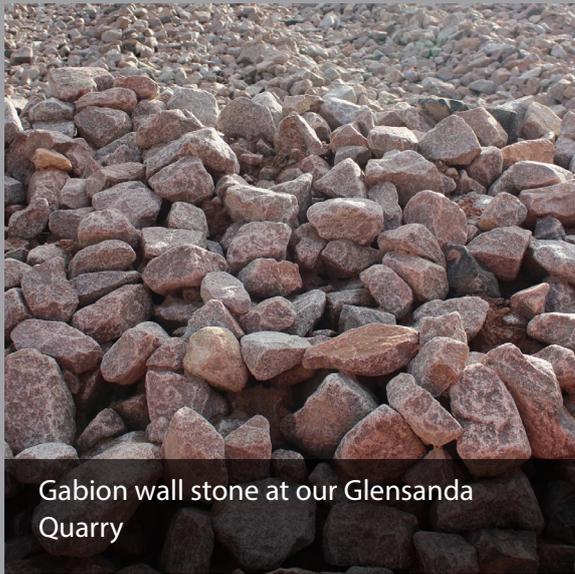

We pride ourselves on our close relationships with clients and partners. You can expect a reliable dedicated logistics service, which provides nationwide delivery options.

Our Gabion stone, is Glensanda Granite sized 90-180mm and meets EN 13383-1:2002, other sizes of rock armour are available.

Glensanda rock has natural interlocking abilities and a natural pink pigmentation giving a unique decorative colour.

What are the benefits of Glensanda Gabion stone?

Gabion baskets are more adaptable, flexible and stronger than most structures because of the way the baskets are bound. This allows the stone to move and breathe when pressure is applied.

The spaces between the Gabion stone allow the water to pass through without affecting the structure making it permeable, helping to reduce pressure elsewhere and prevent erosion. Generally, these are offered as a low cost and quick solution as unskilled workers can easily learn the skills required for assembly.
